Protections **

Input

- **Under-Voltage Lockout**
  Standard version converter shuts if input voltage is below 16 ± 1V.
  For extended Input option – please consult factory.
- **Over-Voltage Lockout**
  Standard version converter shuts down if input voltage is above 53 ± 1V.
  For extended Input option – please consult factory.
- **Reverse Polarity Protection**
  Protection for unlimited time**.**

Output

- **Active Over-Voltage Protection**
  Secondary control circuit takes over if output voltage exceeds 110% ± 5% of nominal voltage.
- **Passive Over-Voltage Protection**
  Transorb at output selected 20% ± 5% above nominal voltage.
- **Overload / Short-Circuit Protection**
  Output voltage turns off and on periodically with low duty-cycle (hiccup) to protect system conductors and converter from short circuit and overload.

General

- **Over Temperature Protection**
  Shutdown if baseplate temperature exceeds +105 °C ± 5 °C.
  Automatic recovery upon cooldown to below +95 °C ± 5 °C.

Functions and Signals

INHIBIT (pin 8)

Description: The ***INHIBIT*** signal is used to turn the power supply ON and OFF.

Operation: Applying "1" or leaving open will turn the power supply ON. For constant operation, leave this pin unconnected.
Applying "0" or shorting this pin to its return line will turn the power supply OFF.
(Optional to change the logic of this signal. Please consult with factory.)

Signal Type: 5V TTL or dry contact (open/short).

Return line: This signal is referenced to ***INPUT RTN*** pin.

Optional to change the logic of this signal. Please consult with the factory.

SENSE (pin 2) & **SENSE RTN** (pin 3)

Description: The ***SENSE*** is used to compensate for voltage drop across the output wires by sensing the voltage at the load and correcting the increasing the output voltage accordingly, to provide the desired voltage at the load's terminals.

Operation: Connect the ***SENSE*** pin to the positive load terminal, and the ***SENSE RTN*** pin to the negative (return) load terminal.
The sense compensation is typically limited to 5% or 0.5V – the lesser of the two.
Note: If not used, connect ***SENSE*** directly to ***OUTPUT*** pins**,** and the ***SENSE RTN*** pin directly to the ***OUTPUT RTN*** pins**.**
DO NOT LEAVE THE SENSE/SENSE RTN PINS UNCONNECTED- the output voltage will increase by 5% to 8%.
