

M7242 SERIES

AC+DC/DC POWER SUPPLY

PRODUCT HIGHLIGHTS

- DUAL INPUT
- SINGLE OUTPUT
- WIDE INPUT RANGE
- HIGH DENSITY
- AC+DC/DC CONVERTER
- UP TO 500W

Applications

Military (Airborne, Mobile, Ground-Fix), Ruggedized, Telecom, Industrial

Special Features

- Universal AC Input
- Wide range DC Input
- High efficiency
- High power factor
- Inrush current limiting (AC & DC)
- Remote inhibit (ON/OFF)
- EMI filters included
- Hot Switch-Over on Input Failure
- Non-latching protections:
 - Overload/short-circuit
 - Over-voltage protection
 - Over temperature

Electrical Specifications

AC Input

Voltage range: 85 to 265 V_{AC}
 Frequency range: 50 to 400 Hz
 Single-Phase

DC Input

Voltage Range: 12 to 36 V_{DC}
 Surge protection: 80 V / 0.1 s
 IAW MIL-STD-704A
 Surge operation: 100V / 50ms
 IAW MIL-STD-1275E

Isolation

AC input to output: 1000 V_{DC}
 AC input to DC input: 1000 V_{DC}
 AC input to Chassis: 1000 V_{DC}
 DC input to Chassis: 100 V_{DC}
 Output to Chassis: 100 V_{DC}
 DC input is not isolated from output

Output

Voltage range: 12 to 36 V_{DC}
 Current: Up to 20 A
 Power: Up to 500 W

Output Voltage Regulation

Up to ±3% (Low to high line voltage, no load to full load, -40 °C to +85 °C).

Ripple and Noise

Typically better than 100 mV (max. 1%) without external capacitance. When connected to system capacitance ripple drops significantly.

Efficiency

AC input: Typical 90%, Min 85%
 DC input: Typical 93%, Min 85%
 (Full load, nominal line voltage, room temperature)

Transient Over-and-undershoot

Load step from 50% to 100% output voltage change less than 10% within 200-300 μs

Turn on Transient

No output voltages overshoot during startup.

Protections *

Input

- **Inrush Current Limiter**
Peak value of up to twice I_{IN} for AC and DC Inputs.
- **Under Voltage Lock-Out**
Unit shuts down (no damage) below $75 V_{AC}$ or $10 V_{DC}$.

Output

- **Active Over Voltage Protection**
Internal control protects unit (no damage) ~10% above nominal voltage.
- **Passive Over Voltage Protection**
Transorbs on outputs protect loads ~20% above nominal voltage.
- **Overload/Short Circuit Protection**
Continuous protection (10-50% above maximum current) for unlimited time (Hiccup).

General

- **Over Temperature Protection**
Shutdown at base plate temperature of $+105\text{ }^{\circ}\text{C} \pm 5\text{ }^{\circ}\text{C}$. Automatic recovery at base plate temperature lower than $+90\text{ }^{\circ}\text{C} \pm 5\text{ }^{\circ}\text{C}$.

Environmental Conditions

Designed to meet or exceed MIL-STD-810F

Temperature

Operating: $-40\text{ }^{\circ}\text{C}$ to $+85\text{ }^{\circ}\text{C}$ (base plate)
Storage: $-55\text{ }^{\circ}\text{C}$ to $+125\text{ }^{\circ}\text{C}$

Altitude

Method 500.4
Procedure I – up to 70,000 ft.
Procedure II – up to 30,000 ft.

Salt Fog

Method 509-4

Humidity

Method 507.4 - Up to 95%.

Vibration

Figure 514.5C-17. General minimum integrity exposure. (1 hour per axis.)

Shock

Saw-tooth, 20g peak, 11 ms

EMC

Designed to meet[†] MIL-STD-461E

CE102

CS101

CS114

CS115

CS116

RS101

RS103

Reliability

150,000 hours, calculated IAW MIL-HDBK-217F Notice 2 at $+85\text{ }^{\circ}\text{C}$ baseplate, Ground Fixed environment.

Environmental Stress Screening (ESS)

Including random vibration and thermal cycles is also available. **Please consult factory for details.**

* Thresholds and protections can be modified / removed – please consult factory.

† Compliance achieved when tested with shielded cables; DC input tested with 5 μH LISNs.

Functions and Signals

Output ON/OFF Control (Connector J3, Pins #1 and #2)

Connecting these pins together toggles the output ON or OFF, based on the following conditions:

- PSU will turn OFF when the output is currently ON and the connection of these control pins lasts for more than 3 seconds.
- The PSU will turn ON when the output is currently OFF and the connection of these control pins lasts for more than 100 ms seconds.
- To eliminate unwanted output toggling (if an external button is pushed too long) the PSU ignores additional change requests until the pins have been disconnected for 1 second.

(a continuous SHORT/OPEN version can be implemented – *consult factory*).

Temperature Warning (Connector J3, Pins #3 and #5)

These pins are used to indicate when the unit is within 20 °C of the maximum temperature prior to execution of automatic thermal shutdown.

This signal can be used by an external monitoring system to indicate when the unit is operating fairly close to the thermal shut down temperature.

- This interface is isolated from any internal electronic connection or grounds.
- These pins are shorted together (CLOSED condition) when the baseplate temperature is within 20°C of the thermal shutdown threshold.
The connection's resistance is 50 Ω or less, measured across these pins.
The connection is capable of handling at least 40 mA from an external source in this condition
- These pins are disconnected (OPEN condition) when the baseplate temperature is below 20 °C of the thermal shutdown threshold.
The connection resistance is higher than 100 kΩ measured across these pins.

Thermal Shutdown Warning (Connector J3, Pins #4 and #5)

These pins are used to indicate when the unit is within 10 °C of the maximum temperature prior to execution of automatic thermal shutdown.

This signal can be used by an external monitoring system to indicate when the unit is operating fairly close to the thermal shut down temperature.

- This interface is isolated from any internal electronic connection or grounds.
- These pins are shorted together (CLOSED condition) when the baseplate temperature is within 10°C of the thermal shutdown threshold.
The connection's resistance is 50 Ω or less, measured across these pins.
The connection is capable of handling at least 40 mA from an external source in this condition
- These pins are disconnected (OPEN condition) when the baseplate temperature is below 10 °C of the thermal shutdown threshold.
The connection resistance is higher than 100 kΩ measured across these pins.

Pin Assignment**DC Input (Connector J1)**

Connector type: Positronic CBM8W8M75000S/AA or eq.

Mating connector type: Positronic CBM8W8S0000S/AA (contacts ordered separately) or eq.

Pin #	Function	Polarity	Pin #	Function	Polarity
A1	DC Input	+	A5	DC Input RTN	-
A2	DC Input	+	A6	DC Input RTN	-
A3	DC Input	+	A7	DC Input RTN	-
A4	DC Input	+	A8	DC Input RTN	-

AC Input (Connector J2)

Connector type: Positronic CBM3W3M75000S/AA or eq.

Mating connector type: Positronic CBM3W3S0000S/AA (contact ordered separately) or eq.

Pin #	Function
A1	AC Line
A2	AC Neutral
A3	AC GND

DC Output & Control (Connector J3)

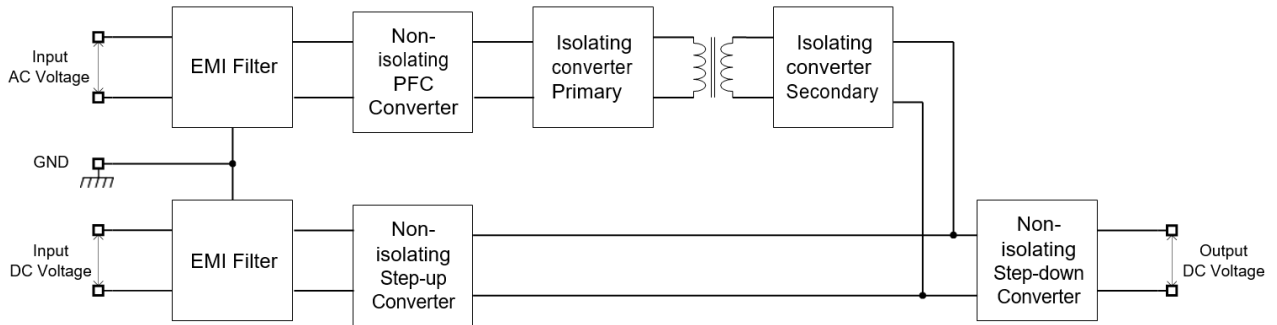

Connector type: Positronic CBM9W4S75000S/AA or eq.

Mating connector type: Positronic CBM9W4M2000S/AA or eq.

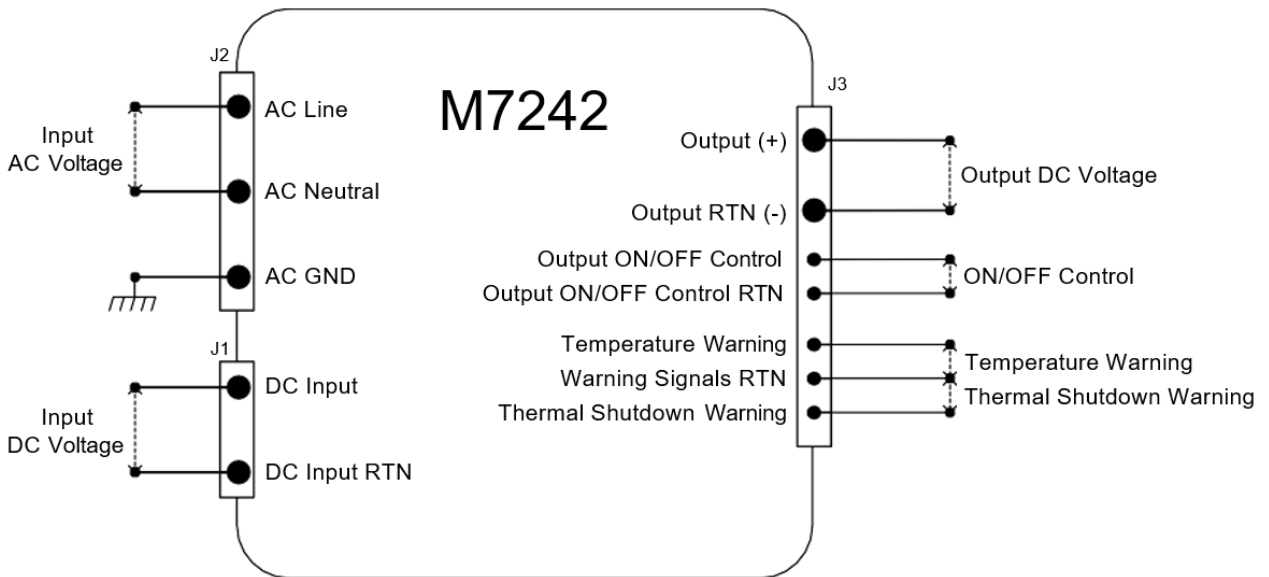

Pin #	Function	Polarity	Pin #	Function
A1	Output	+	1	Output ON/OFF Control
A2	Output	+	2	Output ON/OFF Control RTN
A3	Output RTN	-	3	Thermal Shutdown Warning
A4	Output RTN	-	4	Temperature Warning
			5	Warning Signals RTN

Note: All pins with identical function should be connected together for best performance.
